OBJECTIVE

- Computer Science and Engineering graduate with hands-on experience in full-stack web development (MERN), machine learning, and AI application development. Seeking an entry-level software role to apply strong foundations in object-oriented programming, database management, problem-solving, and modern AI technologies while contributing to real-world solutions.

SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Core Concepts: Object-Oriented Programming, DBMS, REST APIs

Web Technologies: HTML, CSS, React, Tailwind CSS, Vite, Node.js, Express, FastAPI

AI / LLM: LangChain, LangGraph, RAG, Embeddings, Vector Databases

Databases: MySQL, MongoDB, Firebase Firestore

Tools / Cloud: Git, GitHub, Firebase, Vercel

EDUCATION

Future Institute of Engineering and Management (Affiliated to MAKAUT) | 2022 – 2026

Bachelor of Technology in Computer Science and Engineering | CGPA: 7.78 | Kolkata, India

West Bengal Council of Higher Secondary Education | 2020 – 2022

Higher Secondary Education | Percentage: 91% | India

West Bengal Board of Secondary Education | March 2020

Secondary Education | Percentage: 86% | India

PROJECTS

NexusFlow — Multi-Tenant SaaS Workspace Platform | React, Firebase, Vercel

[Live Demo](#) | [GitHub](#)

- Built a workspace-based SaaS app with Firebase Authentication and Firestore for project, task and team management, deployed on Vercel.
- Implemented role-based access control (Owner, Admin, Manager, Member, Viewer) with Firestore security rules and per-workspace data isolation.
- Developed project/task workflows with a Kanban board, task comments, workspace activity logging, and an analytics dashboard (Recharts) driven by workspace data.
- Implemented project/task webhook events with API and webhook management interfaces; tested delivery in development using Webhook.site.

Doctor Appointment Booking System | MERN Stack

[Live Demo](#) | [GitHub](#)

- Built a full-stack doctor appointment platform using React.js, Node.js, Express.js, MongoDB and Mongoose, with separate patient and doctor workflows.
- Developed REST APIs for user authentication, doctor registration/application, doctor data management and appointment operations, secured with JWT and bcrypt.
- Implemented role-based workflows: patients can discover doctors and book appointments, while doctors manage their professional profiles and appointment activity.
- Deployed the application with a live production frontend, making the project accessible online.

Spam Mail Detection System | Machine Learning

- Built an email spam classifier with Logistic Regression, using text preprocessing and TF-IDF feature extraction on a labeled dataset.
- Evaluated classification performance of the trained model.

CERTIFICATIONS

- Full Stack Web Development (MERN Stack) — Ardent, 2024

EXTRA-CURRICULAR ACTIVITIES

- Playing cricket, Painting
